DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 32 and 37 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear how to form a conductor plug without having something to hold or shape the plug.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 18-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chu (US 5,783, 471).

Chu discloses the steps of:

first MISFETs arranged in said first portion;

second MISFETS arranged in said second portion;

a plurality of conductor plugs (315 and 313, fig. 3M) formed in said insulating film in said first and second portions;

a first conductive strip (316, fig. 3N) formed on said insulating film in said first portion and electrically connected to one of a source and a drain region of said first MISFETs by said conductor plugs; and

a second conductive strip (317, fig. 3N) formed on said insulating film in said second portion and electrically connected to one of a source and a drain region of said second MISFETs by said conductor plugs (col. 4, lns. 35-54).

Chu discloses the claimed invention except the forming another insulating film on the first insulating, with a conductor plug formed in the insulating film in the first portion, and forming a conductive strip on the another insulating film that electrically connects to one of a source and a drain region of said first MISFETs. However, the examiner takes *official notice* that one of ordinary skill in the art would use multilevel interconnects when forming memory devices. Therefore, these limitations add no patentable weight to the claimed invention, than that which is already known.
